

New Knowledge from Old Mines

Reflecting utilisation strategies of post-mining potentials

The academic and the regional partners work closely together in ReSource. The scientists analyse the situation of the partner regions and support them with developing integrated post-mining strategies. Further on, they produce thematic European maps, an internet knowledge base, and guidelines for strategy development.

The scientific work group consists of institutions renown for their expertise in spatial development, each of them representing one partner country: Leibniz Institute of Ecological and Regional Development (IOER), Germany, Karl Franzens University Graz (KFU), Austria, Urban Planning Institute (UPIRS), Slovenia, Mendel University of Agriculture and Forestry (MZLU), Czechia, Eötvös Loránd University (ELTE), Hungary, University of Wrocław, Poland.

We are looking for new perspectives

ReSource project is implemented through the CENTRAL EUROPE. Programme co-financed by the ERDF.
